Rare earth permanent magnet NdFeB is a new kind of magnetic material developed in the 1980's with excellent magnetic characteristics (high energy product and high coercive force etc.) and relatively low cost. It is getting to replace the traditional magnets of hard ferrite, AlNiCo and SmCo in many fields such as electro-acoustic devices, electric motors, sensors/transducers, instruments and meters, auto industry, petrochemical industry and magnetic health-care products etc.

Material Information

- Produced by powder metallurgical method with chemical composition of Nd₂Fe₁₄B
- High resistance to demagnetization
- High magnetic values (Br, bH_c, iH_C und (BH)_{max})
- Excellent cost to performance ratio
- Reasonable temperature stability
- Very brittle & hard
- Poorest corrosion resistance of all commercial magnetic materials
- Not suitable for application which exposed in high temperature conditions
